

**Voxzogo<sup>®</sup>**

vosoritide

**powder and solvent for solution for injection****Summary of the Risk Management Plan (RMP)**

RMP v3.4 – 14. September 2023

with Switzerland-specific annex

The Risk Management Plan (RMP) is a comprehensive document submitted as part of the application dossier for market approval of a medicine. The RMP summary contains information on the medicine's safety profile and explains the measures that are taken in order to further investigate and follow the risks as well as to prevent or minimize them.

The RMP summary of Voxzogo is a concise document and does not claim to be exhaustive.

As the RMP is an international document, the summary might differ from the «Arzneimittelinformation / Information sur le médicament» approved and published in Switzerland, e.g. by mentioning risks occurring in populations or indications not included in the Swiss authorization.

Please note that the reference document which is valid and relevant for the effective and safe use of Voxzogo in Switzerland is the «Arzneimittelinformation / Information sur le médicament» (see [www.swissmedicinfo.ch](http://www.swissmedicinfo.ch)) approved and authorized by Swissmedic. Drac AG is fully responsible for the accuracy and correctness of the content of this published summary RMP of Voxzogo.

## PART VI: SUMMARY OF THE RISK MANAGEMENT PLAN BY PRODUCT

### Summary of Risk Management Plan for Voxzogo (vosoritide)

This is a summary of the RMP for Voxzogo. The RMP details important risks of Voxzogo, how these risks can be minimised, and how more information will be obtained about Voxzogo's risks and uncertainties (missing information).

Voxzogo's SmPC and its package leaflet give essential information to healthcare professionals and patients on how Voxzogo should be used.

This summary of the RMP for Voxzogo should be read in the context of all this information including the assessment report of the evaluation and its plain-language summary, all which is part of the European Public Assessment Report (EPAR).

Important new concerns or changes to the current ones will be included in updates of Voxzogo's RMP.

#### I. The medicine and what it is used for

Voxzogo is presently indicated for the treatment of achondroplasia in patients 4 months of age and older whose epiphyses are not closed (see SmPC for the full indication). It contains vosoritide as the active substance and it is given by daily subcutaneous injection.

Further information about the evaluation of Voxzogo's benefits can be found in Voxzogo's EPAR, including in its plain-language summary, available on the EMA website, under the medicine's webpage

<https://www.ema.europa.eu/en/medicines/human/EPAR/voxzogo>

#### II. Risks associated with the medicine and activities to minimise or further characterise the risks

Important risks of Voxzogo, together with measures to minimise such risks and the proposed studies for learning more about Voxzogo's risks, are outlined below.

- Measures to minimise the risks identified for medicinal products can be:
- Specific information, such as warnings, precautions, and advice on correct use, in the package leaflet and SmPC addressed to patients and healthcare professionals;
- Important advice on the medicine's packaging;
- The authorised pack size — the amount of medicine in a pack is chosen so to ensure that the medicine is used correctly;
- The medicine's legal status — the way a medicine is supplied to the patient (e.g. with or without prescription) can help to minimise its risks.

Together, these measures constitute *routine risk minimisation* measures.

In addition to these measures, information about adverse reactions is collected continuously and regularly analysed, including PBRER assessment so that immediate action can be taken as necessary. These measures constitute *routine pharmacovigilance activities*.

If important information that may affect the safe use of Voxzogo is not yet available, it is listed under 'missing information' below.

## II.A. List of important risks and missing information

Important risks of Voxzogo are risks that need special risk management activities to further investigate or minimise the risk, so that the medicinal product can be safely administered. Important risks can be regarded as identified or potential. Identified risks are concerns for which there is sufficient proof of a link with the use of Voxzogo. Potential risks are concerns for which an association with the use of this medicine is possible based on available data, but this association has not been established yet and needs further evaluation. Missing information refers to information on the safety of the medicinal product that is currently missing and needs to be collected (e.g. on the longterm use of the medicine);

List of Important Risks and Missing Information	
Important Identified Risks	None
Important Potential Risks	None
Missing Information	<ul style="list-style-type: none"><li>• Long-term safety including skeletal effects as impaired function of extremities and joints and immunogenic potential</li><li>• Use in pregnancy</li><li>• Use in patients 4 months to 5 years old</li></ul>

**II.B. Summary of important risks**

<b>Missing Information: Long-term safety including skeletal effects as impaired function of extremities and joints and immunogenic potential</b>	
Risk minimisation measures	<u>Routine risk minimisation measures:</u> Prescription only medicine: Voxzogo should be initiated and directed by a physician appropriately qualified in the management of growth disorders or skeletal dysplasias.  <u>Additional risk minimisation measures:</u> None
Additional pharmacovigilance activities	<u>Additional pharmacovigilance activities:</u> Ongoing clinical studies 111-205, 111-208, 111-302, 111-209, and ongoing PASS Study 111-603.

<b>Missing information: Use in pregnancy</b>	
Risk minimisation measures	<u>Routine risk minimisation measures:</u> SmPC Sections: 4.6, 5.3 PL Sections: 2 Prescription only medicine: Voxzogo should be initiated and directed by a physician appropriately qualified in the management of growth disorders or skeletal dysplasias.  <u>Additional risk minimisation measures:</u> None
Additional pharmacovigilance activities	<u>Additional pharmacovigilance activities:</u> None

<b>Missing information: Use in patients 4 months to 5 years old</b>	
Risk minimisation measures	<u>Routine risk minimisation measures:</u> SmPC Sections: 4.8, 5.1. 5.2 PL Sections: None Prescription only medicine: Voxzogo should be initiated and directed by a physician appropriately qualified in the management of growth disorders or skeletal dysplasias.  <u>Additional risk minimisation measures:</u> None
Additional pharmacovigilance activities	<u>Additional pharmacovigilance activities:</u> Ongoing clinical studies 111-208 and 111-209, and ongoing PASS Study 111-603.

**II.C. Post-authorisation development plan****II.C.1 Studies which are conditions of the marketing authorisation**

None

**II.C.2 Other studies in post-authorisation development plan**

Study Short Name	Purpose of the study
111-205	To assess long-term safety and efficacy
111-208	To assess long-term safety and efficacy
111-302	To assess long-term safety and efficacy
111-209	To assess safety and efficacy in children who are at risk of requiring cervicomedullary decompression surgery
111-603	To evaluate long-term safety in patients with ACH treated with vosoritide
